

Test Feature — Defect Reel

Quality-control scan against **Netflix / IMF streaming delivery** · 00:00:30 runtime · defect_film.mov

61 /100 GRADE F	FAIL 10 blocking issue(s) must be corrected before delivery. 10 blocking · 2 review · 13 passed
---------------------------	--

Category scores

Area	Score	Rating	
Video	65	not deliverable	
Audio	68	significant work	
Subtitles	29	not deliverable	
Structure	63	not deliverable	

What needs to be fixed

#	Severity	Issue	Measured	Required
1	FAIL	Integrated loudness	-15.8 LUFS	-27 ±2 LKFS
2	FAIL	Legal video levels	0–236	16–234
3	FAIL	Embedded timecode	absent	present (e.g. 01:00:00:00)
4	FAIL	Subtitle duration and gaps	3 timing issues in 4 events	0.83–7s, gap >= 0.083s
5	FAIL	Bit depth	8-bit	>= 10-bit
6	FAIL	Audio bit depth / sample rate	16-bit / 48000 Hz	24-bit / 48000 Hz
7	FAIL	Line length and line count	2 formatting issues	<= 2 lines, <= 42 chars/line
8	FAIL	Reading speed	2 events too fast, peak 182.0 cps	<= 20 cps
9	FAIL	Colour primaries / transfer / matrix	missing: primaries, transfer, matrix	primaries + transfer + matrix all tagged
10	FAIL	Unexpected black	longest 6.0s	<= 4s
11	REVIEW	Runtime	00:00:30	> 60 min for a feature
12	REVIEW	Metadata completeness	missing: title	populated

Findings in detail

FAIL 1. Integrated loudness (audio)

Integrated loudness -15.8 LUFS is +11.2 dB off target. Apply a -11.2 dB static gain trim to the full mix.

Suggested fix: Apply a single static gain trim to the full mix to hit target. Do not re-compress — that changes the mix the director approved.

FAIL 2. Legal video levels (video)

Illegal video levels on 76.9% of sampled frames (measured 0–236, legal 16–234).

Suggested fix: Apply a broadcast-safe limiter in the grade. Do not use a blunt clamp — soft-clip the highlights and lift crushed blacks.

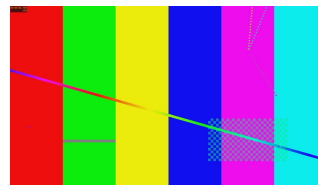

Timecode	Detail
00:00:00:21	luma 0 (legal 16–234)
00:00:08:09	luma 0 (legal 16–234)
00:00:08:16	luma 236 (legal 16–234)
00:00:08:23	luma 235 (legal 16–234)

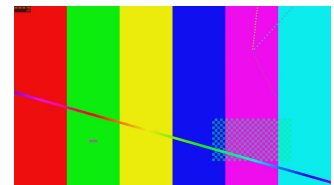

00:00:00:21

00:00:08:09

00:00:08:16

00:00:08:23

FAIL 3. Embedded timecode (structure)

No embedded start timecode found.

Suggested fix: Rewrap with a start timecode track (01:00:00:00 for the first frame of picture is the usual convention).

FAIL 4. Subtitle duration and gaps (subtitles)

2 event(s) below minimum duration, 0 above maximum, 1 sub-minimum or negative gap(s).

Suggested fix: Extend short events to the spec minimum and enforce the minimum inter-event gap. Most subtitle editors can batch-fix this.

Timecode	Detail
00:00:01:00	0.30s (min 0.83s): This one is far too short to read comfortably.
00:00:04:12	0.50s (min 0.83s): This single line is deliberately much longer than the forty-
00:00:01:07	gap 0.020s to next event

FAIL 5. Bit depth (video)

8-bit master; this target requires 10-bit or higher.

Suggested fix: Re-render from the online at 10-bit or higher. 8-bit masters band in gradients and will be rejected.

FAIL 6. Audio bit depth / sample rate (audio)

Audio format: 16-bit (need 24-bit).

Suggested fix: Deliver 24-bit / 48 kHz PCM. Never upsample a 16-bit mix and call it 24-bit — re-render from the session.

FAIL 7. Line length and line count (subtitles)

0 event(s) exceed 2 lines; 2 exceed 42 characters per line.

Suggested fix: Re-break the offending events. Break on grammatical clauses, not at the character limit.

Timecode	Detail
00:00:01:00	1 lines, longest 46 chars: This one is far too short to read comfortably.
00:00:04:12	1 lines, longest 91 chars: This single line is deliberately much longer than the forty-

FAIL 8. Reading speed (subtitles)

2 of 4 events exceed 20 characters/second.

Suggested fix: Condense the text or extend the event. Reading speed above spec is the most common subtitle QC failure.

Timecode	Detail
00:00:04:12	182.0 cps: This single line is deliberately much longer than the forty-
00:00:01:00	153.3 cps: This one is far too short to read comfortably.

FAIL 9. Colour primaries / transfer / matrix (video)

Colour primaries, transfer, matrix not tagged. Downstream systems will guess, and they often guess wrong.

Suggested fix: Rewrap with explicit colour tags (e.g. bt709 / bt709 / bt709). Untagged masters get misinterpreted downstream.

FAIL 10. Unexpected black (video)

1 black segment(s) longer than the 4s limit inside the picture.

Suggested fix: Confirm these are intentional. Mid-content black longer than the spec limit reads as a dropout to automated QC.

Timecode	Detail
00:00:20:00	6.0s of black

00:00:20:00

REVIEW 11. Runtime (structure)

Runtime is 00:00:30 — short for a feature. Confirm this is the full picture and not a reel or excerpt.

Suggested fix: Confirm the runtime matches the delivery paperwork. A mismatch means a missing or duplicated reel.

REVIEW 12. Metadata completeness (structure)

Missing metadata field(s): title.

Suggested fix: *Populate title, aspect ratio and creation metadata at rewrap.*

Source file specification

Container	mov,mp4,m4a,3gp,3g2,mj2
Video codec	h264 · yuvj420p · 8-bit
Raster / rate	1920x1080 @ 24.0 fps
Runtime	00:00:30
Start timecode	not present
File size	0.02 GB
Subtitle tracks	0
Audio 1	pcm_s16le · stereo · 48000 Hz · s16

Passed checks

Channel configuration · Silent or dead channels · True peak ceiling · Container / stream integrity · Video codec / wrapper · Raster size · Frame rate · A/V sync drift · Subtitle / caption track present · Scan type / interlacing · Frozen / repeated frames · Head / tail black · Stuck / dead pixels

Scope notes

- Netflix expects textless elements and a separate M&E track; this engine checks the primary deliverable only.
